IDENTIFIERS	*Arkansas

ABSTRACT

Information on the geographic and institutional origins of students at 32 Arkansas state and private colleges and universities in the fall 1980 is presented in tabular, geographic, and narrative form. Although the number of full-time, entering students from both Arkansas and out-of-state has declined, their proportions have remained relatively constant: 84% in-state and 14% out-of-state (excluding U.S. territories and foreign countries). A total of 57,677 in-state undergraduates registered at Arkansas institutions during fall 1984, down 820 from fall 1983. Undergraduates from other states decreased by 2.7%. Arkansas college students relocated among the various institutions less in 1984 than in the previous fall semester: 3,713 compared to 3,973. More students transferred into Arkansas institutions from institutions out-of-state during fall 1984 than fall 1983. The number of graduate students in Arkansas universities rose considerably over fall 1983. The 12% rise is a direct result of public school teachers returning to campuses to fulfill requirements of the Teacher Testing Law. First-professional enrollment dropped 1.9%. Arkansas counties with large populations and those containing public institutions have the highest participation rates. (SW)

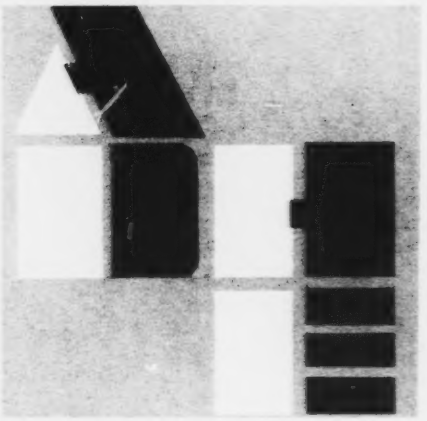
GEOGRAPHIC AND INSTITUTIONAL ORIGIN OF ARKANSAS COLLEGE STUDENTS, FALL 1984



REPORT 84-6

Donna Christian Davoren
Research Analyst

February 1985

FOREWORD

This edition of the Arkansas Department of Higher Education's Geographic and Institutional Origin of Arkansas College Students is the fifth in the series of such reports generated through the Arkansas Higher Education Information System (AHEIS). Because of the amount of historical data now available, ADHE staff has been able to comment upon trends in origins of students who attend the 32 state and private colleges and universities. For the first time, ADHE staff has introduced the concept of college participation rates as a measure for determining interest in higher education among Arkansas residents.

We have generated this annual report earlier than in the past in order to provide timely information for higher education administrators who may wish to use such data in their planning processes. Only through the cooperation of institutional research staff at each institution can the ADHE staff analyze the raw data and generate this report within a time frame useful to the institutions.

The principle author was Donna Davoren. Mark Byrd provided technical assistance, and John Spraggins supplied editorial support. Mary Griebel and the ADHE production staff prepared the text and tables for final publication. ADHE invites comments and suggestions concerning this report.

EXECUTIVE SUMMARY

The number of full-time first-time-entering students has declined each year since fall 1980. The fall 1984 figure of 12,670 was 14.3% lower than the comparable 1980 number. This trend will not likely continue, according to recent studies that predict an offsetting of decreasing high school graduates by increasing in-migration of college-aged students. Though the number of full-time first-time-entering students from both Arkansas and out-of-state has declined, their proportions have remained relatively constant: 84% in-state and 14% out-of-state (excluding U.S. Territories and foreign countries). For most institutions, 3% draw area boundaries have fluctuated little over the past five years.

A total of 57,677 in-state undergraduates registered at Arkansas institutions during fall 1984, down 820 from fall 1983. Undergraduates from other states decreased in numbers by 2.7%. Arkansas college students relocated among the various institutions less in 1984 than in the previous fall semester: 3,713 compared to 3,973. More students transferred into Arkansas institutions from institutions out-of-state during fall 1984 than fall 1983.

The number of graduate students in Arkansas universities rose considerably over fall 1983. The 12% rise is a direct result of public school teachers returning to campuses to fulfill requirements of the Teacher Testing Law. First-professional enrollment dropped 1.9%, apparently a normal fluctuation in limited-enrollment programs.

College participation rates for 1980,1981, and 1982 identify the percentage of counties' populations that enrolled in Arkansas institutions of higher education. Counties with large populations and those containing public higher education institutions have the highest participation rates.

GEOGRAPHIC AND INSTITUTIONAL ORIGIN OF ARKANSAS COLLEGE STUDENTS FALL 1984

This report is the fifth in a series on the origins of Arkansas college students. Because most of the tables in this report are comparable to tables in past geographic origin reports, the reader need only refer to those for detailed historical comparisions. This report contains some general historical comparisons treated within the sections to which they are related.

All tabular data appear in the body of the report. Appendix A provides draw-area maps for each of the 32 state and independent institutions in Arkansas. Discussion of the draw-area maps appears in the body of the report.

FIRST-TIME-ENTERING UNDERGRADUATE STUDENTS

Origin of Full-Time First-Time-Entering Undergraduate Students

The fall 1984 full-time first-time-entering undergraduate figure of 12,670 was 14.3% below the comparable 1980 number. Since fall 1980, the number of full-time first-time-entering undergraduates has declined each year (see Table 1). This steady decline is a result of two factors:

1) Between 1980 and 1982, the number of high school graduates remained stable (1% increases each of those years)[1] while the college-going rate decreased (see Figure 1).

2) Between 1982 and 1984, the number of high school graduates plunged almost 10%, while the college-going rate remained relatively stable.

This dismal trend will not likely continue for two reasons. First, a recent demographic study[2] offers some promise of increasing numbers of college-aged

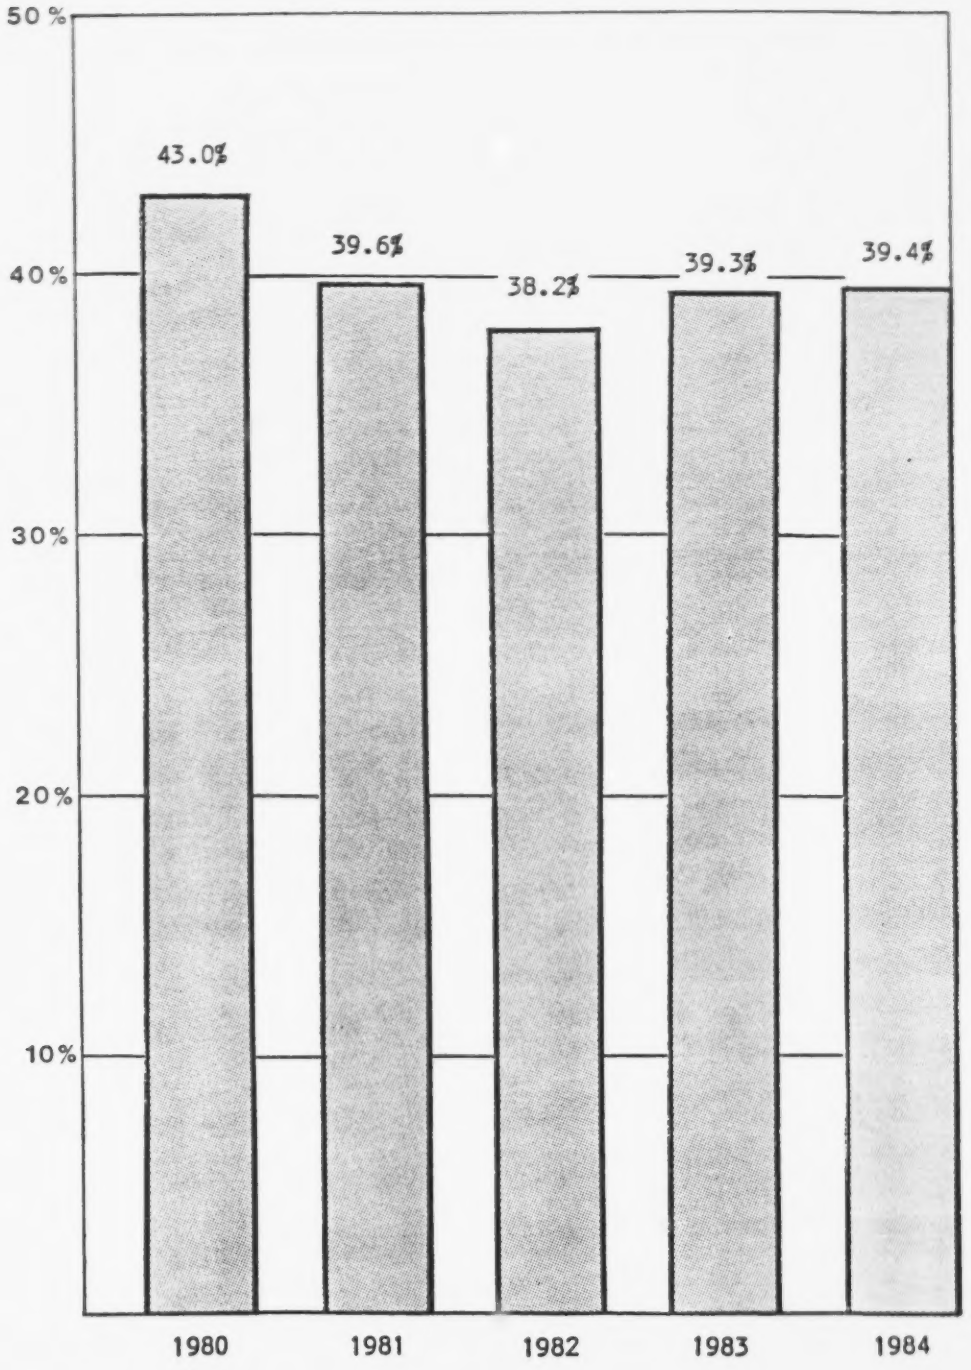
FIGURE 1. TRENDS OF FULL-TIME FIRST-TIME-ENTERING ARKANSAS COLLEGE FRESHMEN AS A PERCENTAGE OF PREVIOUS SPRING ARKANSAS HIGH SCHOOL GRADUATES



persons. Although ADHE's high school graduates projections indicate fewer high school graduates by 2000, these cohort-based declines may be offset by in-migration, this recent study predicts. If this occurs, the pool of college-aged students will be larger. The second factor affecting numbers of full-time first-time-entering students is the rate of college-going. ADHE's effort to interest junior high and high school students in college education began in 1984[3]. Its effect may take several years to assess, but an increase in the college-going rate among Arkansas high school graduates can be a factor in turning the trend of decreasing full-time first-time-entering undergraduate students.

The numbers of both in-state and out-of-state full-time first-time-entering undergraduates have declined since 1980, but the share of in-state and out-of-state students in this category has remained constant, with a 5-year average of about 84% in-state and about 14% out-of-state making up the population of this category. (The remaining 2% consist of students from U.S. Territories, foreign countries, and unknown origins.) Table 2 and the accompanying graph (Figure 2) provide a more detailed analysis of the county and state origins of full-time first-time-entering undergraduates. More detailed information about college going appears in Table 3 and its companion graph (Figure 3).

Institutional Draw Areas

The number of full-time first-time-entering undergraduates from Arkansas determines each institution's draw area -- those counties from which each institution receives new students. Counties from which 3% or more of the previous spring high school graduates enroll in an institution represent the major sources of new students for that institution. In general, each institution's 3% draw area has remained relatively stable, with a few fluctuations from year to year. Most state institutions draw new students from the immediate surrounding area, except for the University of Arkansas, Fayetteville (UAF) and the University of Central Arkansas (UCA), whose 3% draw areas cover much of the state. The independent institutions, with the exceptions of Ouachita Baptist University (OBU) and Southern Baptist College

FIGURE 3. FALL 1984 FULL-TIME FIRST-TIME-ENTERING ARKANSAS FRESHMEN AS A PERCENTAGE OF SPRING 1984 ARKANSAS HIGH SCHOOL GRADUATES BY COUNTY

Shaded counties have rates equal to or greater than the statewide rate of 39.4%.

(SBC), have few or no 3% draw areas, but attract students, in smaller numbers, from a wide geographic range.

Table 4 shows the number of Arkansas counties in each institution's 3% draw area and the percentage of full-time first-time-entering undergraduates from the 3% draw area, from other Arknasas counties, and from out-of-state. The state institutions draw at least 50% of their new students from their respective 3% draw areas. In most cases, less than 20% of full-time first-time-entering students that go to state institutions are from out-of-state. Independent institutions generally draw more full-time first-time-entering students from out-of-state, with Harding University (HU) and John Brown University (JBU) drawing about three-fourths of their new students from out-of-state.

Tables A-1 through A-4 in the appendix illustrate the draw areas for each state and independent higher education institution.

UNDERGRADUATE STUDENTS

County of Origin

A total of 57,677 in-state undergraduates registered at Arkansas institutions during fall 1984, down 820 from fall 1983, but comprising a slightly higher proportion of the total undergraduate population: 86.7% compared to 86.5% for fall 1983. Figure 4 illustrates the distribution of undergraduates whose origins were Arkansas counties.

All categories of institutions lost in numbers of undergraduates from Arkansas during fall 1984, although 13 institutions gained in in-state undergraduates over the previous fall. See Table 5 for detailed information on origins of students at each institution.

State of Origin

The number of out-of-state undergraduates (not including student from U.S. Territories or foreign countries) decreased by 2.7% from fall 1983, to 7,424, or 11.2% of total undergraduate enrollment in Arkansas. Of those states that send 300 or more students to Arkansas, only Oklahoma and Mississippi increased their contributions, Mississippi sending 78% more students to Arkansas in 1984 than in 1983. As Figure 5 illustrates, all of the contiguous states send 300 or more students to Arkansas institutions of higher education, but outside the immediate region, only the most populous states send 100 or more undergraduates.

More than half of all institutions gained in numbers of out-of-state undergraduates during fall 1984, but only the state two-year colleges as a category had a net increase. Details concerning state of origin appear in Table 5.

ENTERING UNDERGRADUATE TRANSFER STUDENTS

Arkansas college students relocated among the various institutions less in 1984 than in the previous fall semester. Table 6 shows that 3,713 students transferred to Arkansas institutions from other Arkansas institutions. This figure is down from the 3,963 transfer students of fall 1983. State four-year institutions, as a category, gained the most students from other Arkansas colleges and universities, as Table 7 illustrates. The other three categories of institutions experienced net losses of students to other Arkansas institutions.

Reasons for students' decisions to transfer from one institution to another may include 1) a renewed interest in pursuing a baccalaureate degree and 2) the necessity of cutting down on educational costs. The net gain at the four-year institutions supports these hypotheses, since students may wish to transfer from two-year institutions to work on bachelors degrees, and some migration from independent institutions to state institutions may result in lower fees. Other factors are also involved, since Table 7 shows movement to and from all of the categories.

More students transferred into Arkansas from institutions out-of-state during fall 1984 than fall 1983: 1,915, compared to 1,784. Table 8 details movement from institutions in other states to Arkansas institutions.

GRADUATE AND FIRST PROFESSIONAL STUDENTS

Graduate Students

The number of graduate students in Arkansas colleges and universities rose considerably during fall 1984. Every state university with graduate programs experienced increases over fall 1983 graduate enrollment. The largest student gains occured at Arkansas State University (ASUJ), up 155 students, and UCA, with 140 more students than in the previous year. Arkansas Tech University (ATU) and Southern Arkansas University (SAUM) recorded the largest percentage gains of the state four-year institutions, increasing by 76.6% and 54.5% respectively. The recent emphasis on educational quality and teacher testing appears to be the overriding reason for the graduate enrollment increase. Education is the primary graduate program at all institutions except UAF.

Graduate students in the independent four-year colleges rose also, owing to an increase at HU and new programs at Central Baptist College (CBC). Overall, the number of graduate students increased from 4,915* during fall 1983 to a new record of 5,500 during fall 1984. Tables 9 and 10 provide details of geographic and institutional origins of graduate students at each institution.

* The 1983 Geographic Origins Report did not include HU graduate students in the total. The 4,915 figure is 90 higher than in the 1983 report due to the recent addition of HU graduate students.

First-Professional Students

The three first-professional programs in Arkansas are law at UAF and the University of Arkansas at Little Rock (UALR) and medicine at the University of Arkansas for Medical Sciences (UAMS). Tables 11 and 12 provide details and a summary of first-professional enrollment during fall 1984. Total enrollment was down by 1.9%, with increases at UAF and decreases at UALR and UAMS. These trends are opposite those of 1983, when institutional policy caused a decrease in the number of law students at UAF. Because there have been no more recent

changes of enrollment policy concerning these programs, the differences appear to be normal fluctuations in limited-enrollment programs.

COLLEGE PARTICIPATION RATES

In May 1983, the National Center for Higher Education Management Systems (NCHEMS) published information on college participation rates and their usefulness. That publication, Using College Participation Rates: Opportunities and Pitfalls,[4] by Melodie E. Christal, contained a table of 1978 college participation rates of undergraduate and graduate students for each state. According to NCHEMS's calculations, Arkansas ranked 49th, with 24 college students per 1,000 population, compared to the U.S. rate of 33 college students per 1,000 population.

Using county enrollment data gathered by ADHE and the 1980 actual census and 1981 and 1982 census estimates published by the U.S. Bureau of the Census, ADHE has calculated participation rates for each county and for the state of Arkansas. (The participation rate for a given county is the quotient of the number of Arkansas college students whose residence was the county at the time of college entrance divided by the population of the county.) The resulting state rate is not strictly comparable to the state rate calculated by NCHEMS because of ADHE's lack of residency data for graduate students, but it is close enough for some comparison.

Table 13 lists 1980, 1981, and 1982 participation rates for Arkansas counties and an aggregate statewide rate. The accompanying map (Figure 6) illustrates these county participation rates for 1980, shows counties having rates equal to or greater than the state rate, and indicates the type(s) of institution(s) present in each county.

Assessment of the strength of relationships between participation rates and causal factors are difficult to make without employment of statistical analysis beyond the scope and purpose of this report; but some descriptive statements can be made:

- Participation rates were generally above average in counties that contain state institutions. (Because the 1980 census figures counted students living in college dormitories as residents of the county in

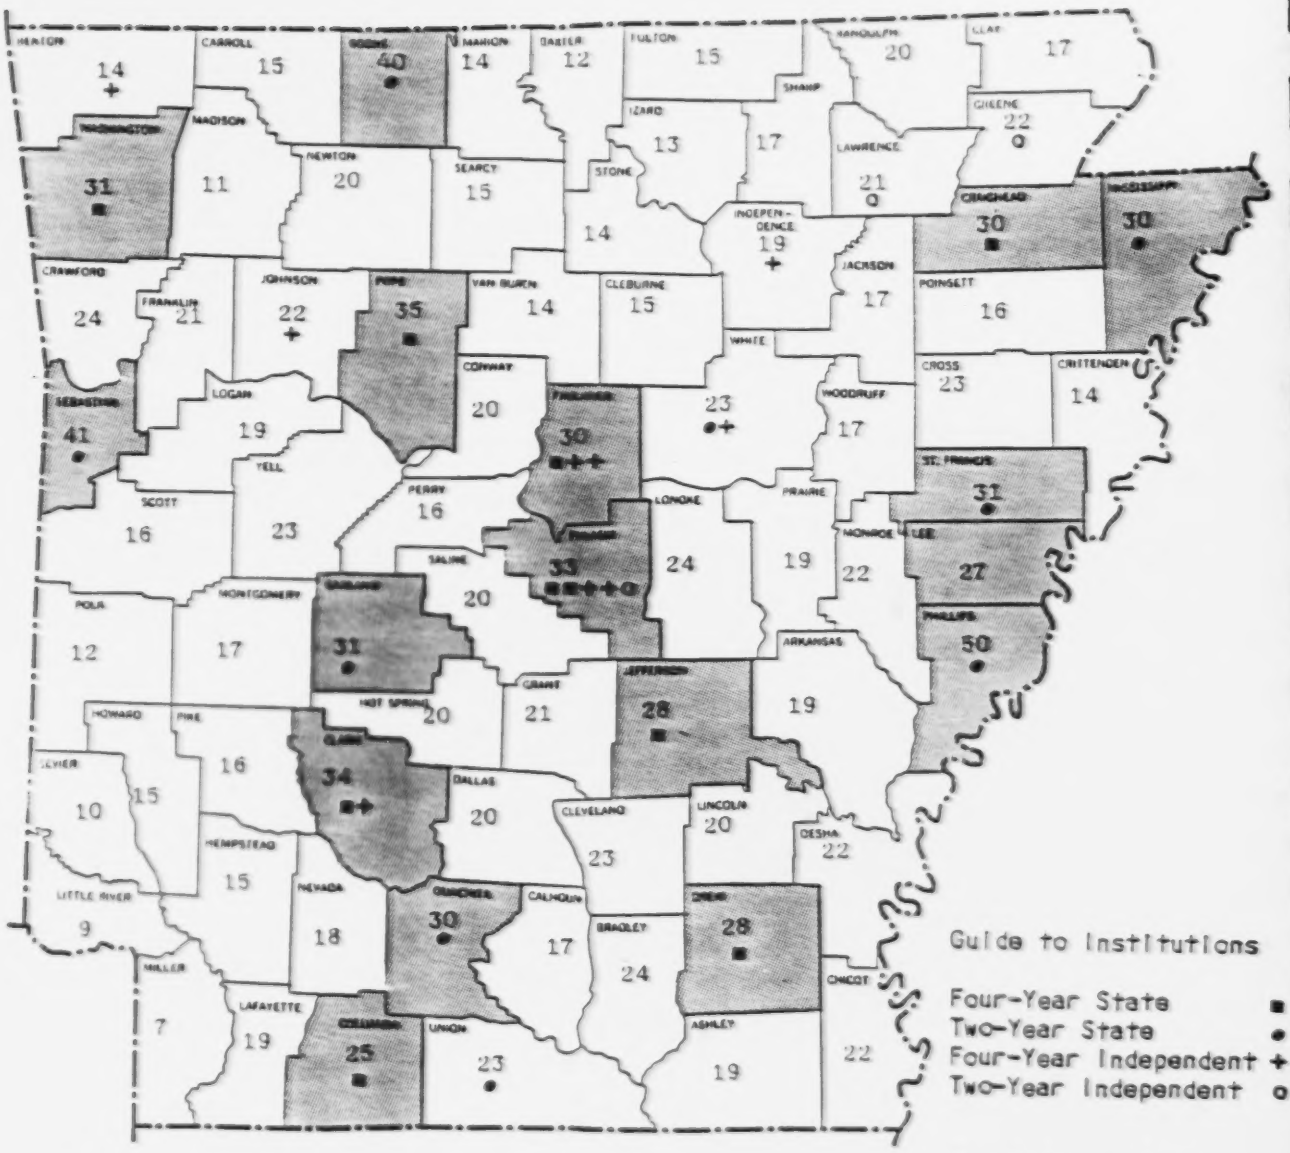
Boided numbers are equal to or greater than the state average

[1] 4S = Four-year State Institutions; 2S = Two-year State Institutions; 4I = Four-year Independent Institutions; 2I = Two-year Independent Institutions.

[2] Based on Actual 1980 Census Data

[3] Based on population estimates from: Bureau of the Census, Local Population Estimates, Series P-26, No. 82-4-4-C, p3.

FIGURE 6. COLLEGE PARTICIPATION RATES BY COUNTIES IN ARKANSAS, 1980
(UNDERGRADUATES PER 1,000 POPULATION)



which the college operates, some error is introduced: in counties that do not contain higher education institutions, the participation rates may be slightly overstated, since the population base is smaller due to those students not having been counted as residents. Conversely, in counties that have institutions, the population base appears greater because out-of-county residents living in dormitories appeared in those counties' populations, causing the understating of the actual participation rate.)

* Participation rates were generally above average in the more heavily populated counties. In most cases, however, those counties also host at least one college campus.

* The northern tier of counties had much lower than average participation rates. Several factors appear to be strong possibilities:

  - In general, the northern counties had a higher than average percentage of older citizens, aged 65 and up. A sampling of other counties with low rates also showed a larger than usual percentage of older citizens. The proportion of traditionally college-aged citizens (18 to 24) was low in these counties.

  - These northern counties, except for Boone County, have no state institutions in them. Also, higher education institutions in Missouri may attract students away from Arkansas, tending to lower further the participation rate as calculated in this report.

  - The northern counties are somewhat isolated because of rough terrain and the lack of interstate highways.

* Sevier, Little River, and Miller Counties in the extreme southwestern corner of the state appear to have the lowest participation rates in the state. Because the data include only Arkansas residents who attend Arkansas higher education institutions, the lower participation rates in these three counties probably reflect out-migration of students rather than a lack of interest in higher education. Texarkana Community

College and East Texas State University at Texarkana draw a significant number of Arkansas students who might otherwise attend Arkansas institutions. The same type of situation may affect other border cities in proximity to colleges and universities in contiguous states.

Other variables that may affect a given county's participation rate include:

* The income levels of the population; income affects the perceived ability to pay for a college education.

* The education level of the adult population; the greater the educational level of the parents, the more likely the student will go to college.

* Types of employers in the county and their need for or dependence on skilled workers.

* The recruitment policies of the state institutions, especially those in or close to a given county.

Some of these factors are measurable, while others are not, but all of them to some extent affect the college participation rate in each county.

APPENDIX B

APPENDIX B: GLOSSARY

Enrollment Status. A student's current attendance status in a post-secondary education institution. The following mutually exclusive categories will be used:

1. First-time-entering Undergraduate Student. A student entering any college for the first time ever. For reporting purposes, this category includes students enrolled in the fall term who entered college for the first time in the prior summer term and students who entered with advanced standing and may actually be classified beyond the freshman level at entry.

2. Entering Undergraduate Transfer Student. An undergraduate student entering the institution for the first time with academic credit attempted or earned at another institution (whether or not the credit is accepted by the institution to which the student transfers). For reporting purposes, this category includes students enrolled in the fall term, who first enrolled as transfer students in the prior summer term.

3. First-Time-Entering Graduate Student. A student who has been awarded an earned baccalaureate or first professional degree and who is entering any institution classified as a graduate level student for the first time. "Graduate Student" includes students enrolled at any level of graduate study - Master's, Specialist, or Doctoral.

4. First-Time entering First Professional Student. A student entering any institution classified for the first time as a first professional students. The student may have been enrolled as an undergraduate or graduate student at the reporting institution.

First-Time-Entering. Refers to a student's initial enrollment at an institution at a given general student level. See **ENROLLMENT STATUS**.

Geographic Origin. The legal residence of a student at the time of original admission to the institution. The following mutually exclusive categories will be used:

1. In-State. A student who atends a postsecondary education institution in the state in which he or she had legal residence at the time or original admission.

2. Out-of-State. A student who attends a postsecondary education institution outside of the state in which he or she had legal residence at the time or original admission. Foreign students are not included in this category.

3. Foreign. A student who attends a postsecondary education institution outside of the country in which he or she had legal residence at the time of original admission.

The in- and out-of-state student categories of this term should not be confused with "In-State Students" and "Out-of-State Students" as classified by Current Legal Residence. The former designations are for purposes of classifying a student's legal residence Upon first admission, while the latter are for classifying a student's current legal residence, usually for tuition-and-fee purposes in state-supported institutions.

Student Level. Refers to the proportion of total requirements a students has obtained, as of the census date, toward the completion of the degree/diploma or certificate program in which the student is enrolled. The following mutually exclusive student level categories will be used.

1. Lower Division. A student who a) is enrolled in a program(s), course(s) or study, or activit(ies) which leads to an associate degree (including three-year associate degree programs) or a bachelor's degree and has earned less than 60 semester credit hours; or b) is enrolled in an undergraduate occupational or vocational program(s) of three or fewer years' duration which results in formal recognition below the baccalaureate

degree. (Typically, this individual should be classified as a freshman or a sophomore.)

2. Upper Division. A student who a) is not in an associate degree or occupational/vocational program(s), b) is enrolled in a bachelor's degree program, and c) has earned 60 semester credit hours. (Typically, this individual is classified as a junior or a senior.) This category includes a student in years three, four, or five of a five- year bachelor's degree program.

3. Unclassified Pre-Baccalaureate. A student who cannot be classified into one of the categories above because he or she is not enrolled in a program of study leading to a degree/diploma or certificate, even though taking courses with regular students. This category does not include students who have been admitted to pursue a degree but have not yet declared a major. This category does include students who have received an earned baccalaureate degree, have not been accepted by the institution for graduate-level study, and are taking undergraduate-level courses, such as teachers taking courses for certification.

4. First Professional. A student who is enrolled in a first professional degree program. First Professional degrees offered in Arkansas are as follows:

   a. Law, General (LLB or JD)
   b. Medicine (MD)
   c. Pharmacy (D Phar)

5. Master's. A student who has received an earned baccalaureate degree, has been accepted for graduate-level study and a) is enrolled in a master's degree program, or b) is enrolled in a doctoral program but has earned less than 30 semester credit hours in graduate course work.

6. Specialist. A student who has received an earned baccalaureate degree and is enrolled in a specialist degree program.

7. Doctoral. A student who has received a master's or specialist degree, or has earned at least 30 semester credit hours in graduate course work, and who is enrolled in a doctoral degree program.

8. Unclassified Post-Baccalaureate. A student who has been awarded an earned baccalaureate degree and who is eligible to enroll in credit courses at the graduate or other post-baccalaureate level but who cannot be classified into one of the categories above because he or she has not been accepted by the institution for graduate-level study.
